

Users will be able to search for recipes by ingredient. When an ingredient is searched for, all recipes containing that ingredient should render on screen while those recipes that do not contain the ingredient will not render. Rendered recipes will still be interactable and link to pages that give more information about those recipes.

Data Analysis:

Bar Chart: Number of ingredients of each recipe

Pie Chart: Difficulty of each recipe.

Line Chart: Cooking time of each recipe.

If the user selects "View all recipes", the charts will display information about all recipes. If the user searches for recipes by an ingredient, the charts will display only information about recipes that contain that ingredient.

Execution Flow:

Login >>> click recipes tab >>> search ingredient >>> select chart type >>> select view all ingredients >>> select other chart types >>> click on recipe link >>> return to recipes >>> return to home >>> logout
